

FOR IMMEDIATE RELEASE

## **iCloud and PhotoStream on WiFi only? "I Don't Think So" says iPhone Developer'**

**Kim Streich releases update to jailbreak tweak to enable WiFi only functions on 3G**

Hong Kong, January 17, 2012 - The popular jailbreak application "*3G Unrestrictor 5*" has been updated to enable FaceTime, iCloud backups, Photo Stream and more on 3G.

*3G Unrestrictor* gives users the power over their mobile internet connection back. The new version continues to allow users to make FaceTime calls, download large content from the App and iTunes store and more on 3G. Among the new features are the ability to make iCloud backup, upload pictures to PhotoStream immediately while on the go as well watch YouTube videos in high quality with more control.

"The iPhone 'just works'... unfortunately many features only work on WiFi! Being able to make FaceTime calls to reach your loved ones and making backups while you are on the go is something many people want and need. *3G Unrestrictor* fills this need and allows many more things."

*3G Unrestrictor* is now available on the jailbreak app store Cydia for \$3.99 for new customers and \$1.99 for owners of the previous version. For more information and screenshots please visit <http://www.3GUnrestrictor.com>.
