

WHEN SECONDS MATTER, FIT COMES FIRST

NORCOM STRAIGHT

FIT

- The Norcom Straight has more positioning options than any other superbike.
- Five frame sizes and 180mm of adjustable seat height.
- Frame pocket engineered into head tube allows for 135mm of cockpit height adjustability.
- Integrated Oval Concepts stem comes in 6 lengths and 4 rise options.
- Fore/aft saddle adjustability equates to range of effective seat tube angles from 74° to 81°.

SPEED

- Designed in the A2 Wind Tunnel using RPT modular frame sections to optimize tube shapes and achieve superior aerodynamics, the Norcom Straight is one of the fastest Tri/TT bikes on the market.
- 16% aerodynamic improvement across yaw angle sweep compared to Fuji's previous Tri/TT platform, the D-6.
- Brakes positioned at rear of fork – on trailing edge of airfoil – improve aerodynamics.
- An extremely clean profile, internally routed cables, and integrated stem and seat clamp further reduce drag.

PERFORMANCE

- RIB technology in downtube and fork provides exceptional stiffness, resulting in enhanced steering precision and improved power transfer.
- Press-in BB86 creates wider cross section, making it 26% stiffer in bottom bracket area than already rigid Fuji D-6.
- Horizontally-adjustable vertical dropouts allow for fast wheel changes and the ability to fine-tune rear wheel position.

NORCOM STRAIGHT

The **NORCOM STRAIGHT** was designed with the overriding purpose to be one of the fastest bikes in the world that can fit anyone – whether it be a world champion time trialist or an age group triathlete. After countless hours in the wind tunnel toiling over the details, our final wind tunnel visit revealed that the **NORCOM STRAIGHT** is one of the fastest bikes on the market – but what's even more important is that it has more positioning options than any of the other superbikes out there. **FIT COMES FIRST.**
