Installation

Windows, Mac OSX and Linux

Unzip the attached file to any folder.

The J2SE runtime must be installed - <http://www.java.com/en/download/manual.jsp>

Blackberry

Unzip the attached file to any folder.

Upload the file to your machine.

If there are problems download the JavaLoader from <http://www.englishthai.co.uk/TrailVer/JavaLoader.zip>.
Unzip this to the same folder as the .cod. Connect your Blackberry to the PC via a USB cable.

Edit the JavaLoader.bat file by replacing the word 'FileName' with the attached dictionary name.

```
javaload -usb load FileName.cod
```

save and double click on the JavaLoader.bat file or run the above string at the command prompt.

If there are still problems please request the Java files and follow the process below.

With a memory card inserted you can send the .jar file directly to your phone's memory card by right clicking the .jar file and choose "Send to" Removable Disc, (the phone must be hooked up to pc via usb cable).

Next, go to your phone and locate the .jar file on your memory card and open it, it should pop up a screen asking you to install it just say ok or yes.

Palm

Unzip the attached file to any folder.

Upload the file to your machine using the Palm installation utility.

This Java application requires WebSphere Everyplace Micro Environment
(<http://palmone.r3h.net/downloads.palmone.com/WEME571.zip>) java runtime to be installed on your device.

Windows Mobile 6.0 (J2ME) – Pocket PC – Smartphone

(requires java runtime) – phoneMe JVM - <http://www.cs.kuleuven.be/~davy/phoneme/?q=node/10>

Unzip the attached file to any folder.

Upload the file to your machine.

Using ActiveSync drag and drop the *.jar file from the folder onto your device.

Next, go to your phone and locate the .jar file and open it and follow the instructions to install.

Windows Mobile – Smartphone

Unzip the attached file to any folder.

Upload the file to your machine.

Using ActiveSync drag and drop the *.exe file from the folder onto your device.

Mobile Phone

Unzip the attached file to any folder.

Upload the file to your machine.

Using Bluetooth drag and drop the *.jar file from the folder onto OBEX Object Push on "Your Phone".

PSP

Unzip the attached file and copy to your PSP memory stick.

Download PSPKVM from <http://www.pspkvm.com>

Copy the file to /PSP/GAME or /PSP/GAME150 folder and run from AMS.

Select "Install from memory stick (ms0:/)". Browse your memory stick and select the *.jad file, which will install and run the application.

After installation it can be run from AMS

NDS

To run the dictionary on the NDS requires the installation of Pstros NDS - MIDP for the Nintendo DS. This program requires a card which allows you to run custom software on the NDS.

Download Pstros NDS from http://www.volny.cz/molej/pstrosnds/java4nds_r6.zip and copy the content of the archive to the card as well as the *.jar file supplied. Run the kvm.nds file (dont forget to patch the program if your card requires it). Then select the *.jad file and press the (A) button.

GP2X

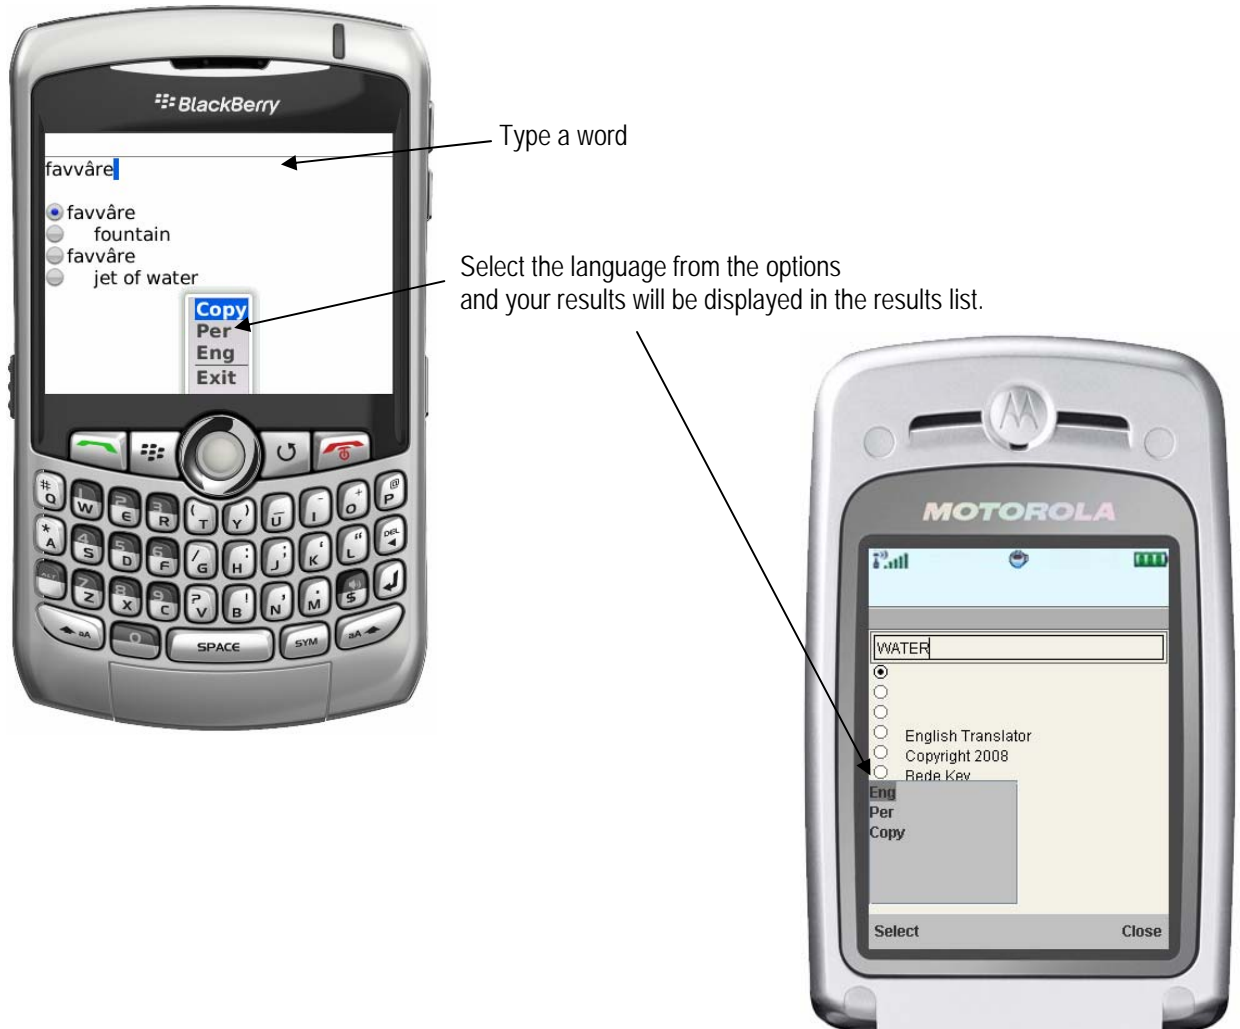

To run the dictionary software on the GP2X requires the installation of phoneMe for GP2X.

This is available from <http://www.4shared.com/file/56929212/ae9c700a/newsinsideorgphoneMEgp2x02.html>.

Open the compressed folder and follow the instructions - README.GP2X.txt.

Operation – Mobile phones and Gaming Devices

Word Search

Word Copy

It is very useful to do a reverse lookup for a word to find synonyms which gives a better indication of the use of the word.

After completing a word search select a word and from the options menu copy the word to the search field.

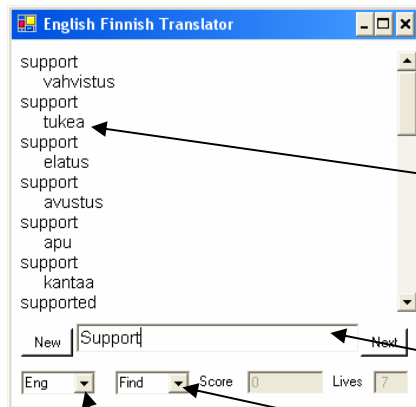

Select the language and the results will be displayed.

Exit

To Exit select Exit (Close)

Operation – Windows, Mac OSX and Linux

Word Search

Results list

Select the language

Select the Find mode
